Professional Summary

Software Developer with experience in Python, C++, Java, and Data Structures & Algorithms (DSA). Skilled in Generative AI, Transformer Models, LangChain, and building cloud-based LLM systems. Strong understanding of machine learning workflows, prompt engineering, and deploying scalable AI solutions. Effective communicator with proven collaboration in multidisciplinary teams.

Experience

AI/LLM Developer Intern

docu3C (FinTech AI Company)

Aug 2025 – Present

- Developing LLM-powered automation tools for analyzing financial documents used by banks and advisory firms.
- Building ML and LLM workflows using Azure OpenAI, Azure AI Foundry, Cognitive Services, and Azure ML Studio.
- Researching and testing GPT-4.1, Llama3, Mistral, and DeepSeek models to improve extraction and summarization accuracy.
- Designing interactive AI-driven interfaces and prompt workflows to support compliance and risk assessment.
- Using a secured cloud environment with \$6,000 compute credits including GPUs, CPUs, and FPGA-based resources.
- Deploying containerized AI services on Azure Kubernetes Service (AKS) to ensure reliability and scalability.
- Participating in daily stand-up meetings and consistently delivering weekly milestones while managing 25–30 hrs/week.

Member & Collaborator

Linpack Club, VIT Bhopal University

2024–Present

- Contributed to AI/ML and MATLAB-focused projects through group collaborations.
- Enhanced analytical and technical skills through workshops, discussions, and hands-on learning activities.

Projects

PolarBrief AI – Legal Argument Analyzer

GitHub Repository

Owner & Developer

- Developed a Streamlit-based system for analyzing legal PDFs using Groq's LLaMA-3 models with LangChain.
- Extracts legal arguments, determines polarity (Pro/Con/Neutral), and generates structured summaries.
- Implemented hybrid OCR combining Tesseract and pdfplumber for accurate text extraction from scanned documents.
- Created a ranking system using LLM scoring and TF-IDF centrality for relevance-based argument ordering.

- Generates downloadable PDF and JSON files including summaries, top arguments, neutral arguments, and citation indexes.
- Produced a validation report confirming 95% accuracy in mapping extracted citations to original pages.

Medical Chat Summary & Risk Scoring System

Owner & Developer

Deployment Link

- Created a real-time medical chat summarization tool using Groq LLMs for context-aware summarization.
- Built a Random Forest classifier for patient risk scoring based on extracted clinical features.
- Implemented full workflow including preprocessing, training, testing, and deployment through Streamlit.

Multimodal Emotion Recognition (WESAD Dataset)

Owner & Developer

- Processed physiological signals from chest and wrist sensors and extracted statistical and frequency-based features.
- Evaluated ML models including LDA, Random Forest, AdaBoost, Decision Tree, and KNN with cross-validation.
- Identified optimal sensor and model combinations to improve overall classification accuracy.

Education

B.Tech in Computer Science and Engineering (Core)

VIT Bhopal University

Expected Graduation: 2027

- GPA: 8.60
- Key Courses: Artificial Intelligence, Machine Learning, Object-Oriented Programming, Data Structures & Algorithms

Skills

Programming: Python, Java, C++

AI/ML: PyTorch, TensorFlow, Transformers, LangChain, Groq API

Cloud: Azure AI Foundry, Azure ML Studio, AKS

Data Tools: Pandas, NumPy, SQL

OCR/CV: OpenCV, Tesseract OCR, pdfplumber

Soft Skills: Communication, Problem-Solving, Teamwork, Leadership

Certifications

- **OOPS Concepts in C++** — CodeChef
- **Introduction to Large Language Models** — Google Cloud Skill Boost
- **OOPS Concepts in Python** — CodeChef
- **Computer Networking Fundamentals** — Coursera
- **Fundamentals in AI and ML** — Vityarthi
- **Generative AI** — Google Cloud Skill Boost
