LinkedIn GitHub LeetCode

Professional Summary

Software Developer skilled in Python, C++, and Java with strong foundations in Data Structures & Algorithms and Object-Oriented Programming. Experienced in building end-to-end applications including backend development, API design, debugging, and deployment. Strong problem-solving ability with hands-on experience in scalable software systems and real-world projects.

Experience

AI/LLM Developer Intern

docu3C (FinTech AI Company)

Aug 2025 – Present

- Developed end-to-end applications for financial document analysis, covering backend development, workflow design, and deployment.
- Built scalable backend systems and automation pipelines using Python and Azure services for real-world production use.
- Designed and implemented APIs and structured workflows for compliance and risk assessment systems.
- Debugged and optimized production pipelines to improve performance, accuracy, and system reliability.
- Deployed containerized applications on Azure Kubernetes Service (AKS), ensuring scalability and high availability.
- Collaborated in agile environments, contributing to feature development, testing, and system improvements.

Member & Collaborator

Linpack Club, VIT Bhopal University

2024 – Present

- Contributed to AI/ML and software development projects through collaborative development.
- Strengthened analytical, problem-solving, and coding skills through workshops and hands-on activities.

Projects

PolarBrief AI – Legal Argument Analyzer

Owner & Developer

GitHub Repository

- Developed an end-to-end application for legal document analysis including backend processing, API design, and automated report generation.
- Implemented structured pipelines for extraction, classification, ranking, and result generation.
- Designed modular and maintainable architecture for efficient debugging and scalability.
- Integrated LLM-based components into a production-ready software system.

Multimodal Emotion Recognition (WESAD Dataset)

Owner & Developer

- Built data processing pipelines for physiological signals and feature extraction.
- Evaluated multiple ML models (Random Forest, AdaBoost, Decision Tree, KNN) using cross-validation.
- Improved classification performance through feature engineering and model optimization.

Education

B.Tech in Computer Science and Engineering (Core)

VIT Bhopal University

Expected Graduation: 2027

- GPA: 8.60
- Key Courses: Data Structures & Algorithms, Object-Oriented Programming, Artificial Intelligence, Machine Learning

Skills

Languages: Python, Java, C++

Core: Data Structures & Algorithms, OOP, Problem Solving, Debugging

Development: Backend Development, REST APIs, Application Design

Tools: Git, GitHub, SQL, Pandas, NumPy, OpenCV

Cloud: Azure, Azure ML Studio, AKS

AI/ML: PyTorch, TensorFlow, Transformers, LangChain

Certifications

- OOPS Concepts in C++ — CodeChef
- OOPS Concepts in Python — CodeChef
- Introduction to Large Language Models — Google Cloud Skill Boost
- Computer Networking Fundamentals — Coursera
- Fundamentals in AI and ML — Vityarthi
- Generative AI — Google Cloud Skill Boost
